ORAL-SYSTEMIC INTEGRATION

For Medical Practices & Care Teams

Education | Implementation | Interdisciplinary Collaboration

Led by Kathleen Carson, DDS

2027 President, American Academy for Oral-Systemic Health

Bring oral-systemic considerations into existing medical care without asking physicians to practice dentistry. Oral-Vitality helps clinicians recognize meaningful oral-health clues, connect them to broader health concerns, and establish practical medical-dental collaboration pathways.

01

BUILD CLINICAL AWARENESS

Clinician & Team Education

Foundational education on oral-systemic connections, including periodontal inflammation, airway and sleep, salivary health, and cardiometabolic and cognitive health. Practical case-based learning helps teams know what to recognize, ask, and communicate.

02

TURN UNDERSTANDING INTO ACTION

Practice Workflow Integration

Design screening prompts, intake and assessment pathways, referral criteria, documentation, and closed-loop communication tailored to the practice. Clarify team responsibilities, reduce duplicated work, and integrate oral-systemic considerations into existing visits.

03

SCALE WITH ONGOING SUPPORT

Multi-Site Implementation & Advisory

Support pilot design, clinician onboarding, team coaching, workflow rollout, and case-based implementation reviews for groups or integrated-care organizations. Engagements are customized to the organization's clinical model and goals.

Build a practical oral-systemic pathway for your patients.

Start with education, then select the level of implementation and advisory support your medical team needs. Contact us to discuss a customized engagement.
