## Vesicular Stomatitis Virus in Rhinos at the San Diego Zoo Safari Park

By Matt Gelvin, Wildlife Care Supervisor, San Diego Zoo Safari Park

Vesicular Stomatitis Virus, a virus most commonly reported in equid populations, was confirmed in rhino species for the first time in 2023 at the San Diego Zoo Safari Park. This vector driven virus affected two species of rhinos and nearly all individuals, several requiring extensive medical care. This presentation follows the timeline of events for the virus and the care for the rhinos from a management perspective.
